

GDPR Compliance Automation

Eliminate GDPR compliance guesswork by mapping data protection controls to evidence with clear ownership. Drata helps you maintain visibility into regulatory expectations, audit readiness, and privacy risk.

DISCOVER THE DRATA DIFFERENCE

► Centralize GDPR Evidence for Regulatory Review

Drata maps GDPR requirements to shared controls and continuously maintained evidence, reducing the need to recreate documentation for each regulatory review. Teams keep records current, consistent, and defensible as regulators, auditors, and internal stakeholders request proof across evolving privacy obligations.

► Maintain Live Visibility Into Privacy Exposure

Drata keeps privacy risks directly linked to controls, data sources, and evidence so teams maintain a current view of exposure. As processing activities, vendors, and regulatory guidance change, privacy posture updates without relying on static assessments or disconnected spreadsheets.

► Assess Third-Party Privacy Risk

Drata uses AI to surface third-party risk signals relevant to GDPR obligations so teams see how vendors and processors may impact personal data protection. Teams gain clarity into where external risk exists, why it matters for regulatory accountability, and what's next when managing vendors and data processing relationships.

► Manage Regional Privacy Obligations Together

Drata manages regional and global frameworks within a single program, allowing GDPR to scale alongside other regulatory requirements. Teams avoid fragmented workflows while maintaining consistent ownership, evidence and reporting across jurisdictions.

ADDITIONAL CAPABILITIES

Map Personal Data

Associate GDPR controls with systems processing personal data to maintain clear ownership.

Monitor Data Controls

Continuously observe GDPR data protection controls to detect failures affecting compliance.

Link Risks Automatically

Flag GDPR-related risks when connected controls fail to support timely mitigation.

Share Compliance Posture

Publish documents securely through Trust Center for customers and regulators.

Answer Privacy Questionnaires

Respond to GDPR privacy questionnaires using AI-assisted, human-reviewed responses.

Prevent Duplicative Effort

Take advantage of overlapping controls for easier multi-framework compliance.
