DRATA

INTEGRATED RISK MANAGEMENT

Agentic TPRM Assessment

Evaluate third-party risk against your own standards across the vendor lifecycle with agentic AI and human oversight. The result: consistent, evidence-backed assessments that are faster to complete and easier to review, explain, and trust.

DISCOVER THE DRATA DIFFERENCE

▶ Retrieve Vendor Documents Instantly

Accelerate assessments with AI that automatically pulls available third-party security evidence into the review, mapped to the vendor's inherent risk tier, while also supporting request-based and manual collection. The agent then evaluates everything together using centralized standards, creating a single, holistic outcome that stays consistent across evidence types, reviewers, and time.

▶ Reduce Manual Evidence Review

The agent synthesizes questionnaires, evidence, and vendor context into one view against your standards, then flags gaps automatically. Reviewers can drive the entire third-party lifecycle in natural language, validating outputs and submitting decisions with full context. This covers inherent risk tiering through residual outcomes while preserving governance and cutting manual effort.

▶ Close Criteria Gaps Without the Manual Chase

Generate targeted follow-up questions automatically from the specific gaps found during assessment. Use natural language to have the agent draft and submit an observation on the spot. This cuts unnecessary back-and-forth and helps teams close gaps efficiently.

▶ Produce Clear, Defensible Assessment Outcomes

Eliminate mixed signals from individual interpretation. Task the agent, in natural language, to explain any result, or let it auto-produce exec-ready outputs linking standards, evidence, and conclusions for every inherent and residual decision. This makes each decision easier to review, explain, and defend.

Accelerate Third-Party Reviews with Autonomous AI Agents

HOW AGENTIC TPRM ASSESSMENT WORKS

Standardize Evaluations
Build your risk standards once, for inherent tiers and residual criteria alike, across every vendor.

Adapt by Risk Tier
Apply different assessment depth based on each vendor's inherent risk tier and attributes—tightening scrutiny where needed.

Enable Auto-Collection
Pull approved documentation directly from vendor Trust Centers to enable faster review timelines.

Automate Workflows
Enable automated access requests and targeted follow-ups to eliminate chasing vendors.

Embedded Agentic Interface
Task the agent to start an assessment, pull context, or draft and submit observations, all through natural language chat.

Maintain Oversight
Stay in control with a full human-in-the-loop experience. Scale autonomous workflows at your own pace.
