

Enterprise-Grade Workspaces

Oversee compliance for multiple products or business units with different frameworks and infrastructure—without duplicating people, vendors, or assets. Scope controls, monitoring, and evidence by workspace while maintaining centralized governance across the entire organization.

DISCOVER THE DRATA DIFFERENCE

► Separate Product Compliance with Workspaces

Run distinct compliance programs for each product or business unit without standing up separate systems with workspaces within Drata. You can scope frameworks, controls, monitoring, and evidence per workspace while keeping shared personnel, vendors, and assets centralized to maintain governance across the entire organization.

► Cross-Share Across Workspaces

When frameworks or controls cannot be shared across environments, teams are forced to rebuild identical components across each product, region, or audit—creating massive duplication. With Drata, ingest once and then link across workspaces to eliminate rebuild and re-upload cycles.

► Increase Efficiency and Scalability

Bring new workspaces online with required integrations already in place and tests available as soon as relevant frameworks and controls are enabled—no bespoke wiring necessary. Drata makes it easy to support the real-world complexities of multi-framework environments, global operations, and distributed accountability.

► Operate One Program Across Multiple Workspaces

Run multiple compliance programs without fragmenting shared operations in Drata. A unified dashboard lets leaders track audit readiness and control performance across all workspaces, while events, test results, and alerts can be filtered and acted on per workspace—ensuring clear audit traceability.

Manage Multiple Programs with Shared Operations

HOW ENTERPRISE WORKSPACES WORK

Add Additional Workspaces

Create a new workspace per business unit or product line to meet needs across the organization.

Enable Frameworks

Assign frameworks to each workspace to separate requirements but maintain centralized governance.

Map Controls

Share control details and supporting evidence across multiple workspaces to reduce duplication.

Switch Between Workspaces

Utilize the Workspace Picker to view all workspaces and easily switch between them.

Manage Events

See system activity and test results by workspace.

Track Metrics

View readiness metrics for all managed frameworks within a single dashboard.
