DRATA

Cyber Essentials Compliance Automation

Cyber Essentials is a UK government-backed framework that establishes a baseline for protecting organizations against the most common threats. Drata helps teams centralize evidence, map controls, and automate continuous monitoring to stay prepared for certification.

DISCOVER THE DRATA DIFFERENCE

▶ Apply Foundational Controls Consistently

Drata maps Cyber Essentials requirements to a centralized, control-centric structure, helping enterprises apply baseline security controls consistently. Teams reduce manual setup and keep Cyber Essentials aligned with other frameworks without maintaining separate documentation or duplicating governance processes.

▶ Validate Supplier Security Against UK Standards

Drata extends Cyber Essentials controls into third-party assessments so enterprises can verify suppliers meet baseline security requirements. Teams track vendor alignment, evidence, and ownership in-platform to support contract eligibility and supplier assurance.

▶ Track Threat Exposure

Drata links common cyber risks directly to Cyber Essentials controls, ownership, and supporting evidence, giving visibility into how foundational threats are addressed. As environments change, risk alignment remains current without fragmented tracking across tools, teams, or spreadsheets.

▶ Maintain Readiness for Contract Reviews

Drata keeps controls, evidence, and ownership continuously up to date so organizations stay prepared for assessments and contract reviews. Teams avoid reactive preparation by operating Cyber Essentials as an ongoing security hygiene program rather than a one-time requirement.

ADDITIONAL CAPABILITIES

Implement Baselines
Apply Cyber Essentials controls using a structured library with clear ownership across systems.

Publish Trust Materials
Distribute Cyber Essentials documentation through Trust Center to support transparency.

Centralize Evidence
Unify Cyber Essentials evidence to support assessments and recurring verification cycles.

Assess Third Parties
Review vendor security posture against Cyber Essentials requirements using risk workflows.

Automate Workflows
Route Cyber Essentials tasks, reviews, and remediation through custom workflows integrated with tickets.

Monitor Control Coverage
Continuously observe Cyber Essentials controls to detect gaps affecting baseline security posture.
