DRATA

HIPAA Compliance Automation

Manage protected health data and achieve HIPAA compliance. Drata maps privacy and security controls to continuous evidence and defined ownership to provide visibility into audit readiness as regulatory expectations increase.

DISCOVER THE DRATA DIFFERENCE

▶ Eliminate Redundant HIPAA Preparation

Drata reuses shared controls and evidence across audits, reducing repeated HIPAA documentation work. Teams maintain defensible records for audits, investigations, and internal reviews without rebuilding evidence each time oversight cycles repeat or scope expands.

▶ Track PHI Risk Across Security and Privacy

Drata links HIPAA-related risks directly to safeguards, controls, and evidence, giving teams a consistent and current view of exposure. Risk posture updates automatically without manual reconciliation as environments, threats, and protections evolve.

▶ Clarify HIPAA Control Gaps During Reviews

Drata AI helps explain control test issues—including unexpected control behavior—so teams gain clarity into what is occurring, why it matters for compliance expectations, and what to review next during assessment preparation and compliance maintenance.

▶ Prepare for Assessments Without Disruption

Drata centralizes evidence, testing results, and auditor collaboration so teams prepare for recurring HIPAA assessments more predictably. Reviews become less disruptive as documentation, ownership, and responses stay organized between assessment cycles.

ADDITIONAL CAPABILITIES

Utilize Safeguards
Define HIPAA administrative, technical, and physical safeguards using a centralized, control structure.

Monitor Safeguard Controls
Continuously monitor HIPAA controls to detect failures impacting protected health information.

Track Compliance Risks
Automatically surface compliance risks when safeguard controls fail to support timely mitigation.

Oversee Policies
Manage HIPAA policies through structured reviews, approvals, and maintained version history over time.

Retain Audit Evidence
Keep HIPAA audit evidence centrally to support investigations, examinations, and recurring reviews.

Review Business Associates
View third-party security posture against HIPAA requirements using scalable vendor risk workflows.
