DRATA

CONTINUOUS COMPLIANCE

Multi-Framework Support

Centralize framework requirements in one system to support multiple frameworks at once. With Drata, shared controls, automated tests, and continuously-collected evidence enable consistent compliance management. Teams maintain flexibility for framework-specific requirements while standardizing how compliance is run across the organization.

DISCOVER THE DRATA DIFFERENCE

▶ Utilize Pre-Built or Create Custom Frameworks

Manage your existing program today and easily expand to new frameworks over time. Choose from 30+ existing frameworks or create your own custom framework in order to meet internal or customer requirements.

▶ Centralize Framework Requirements

Bring pre-built and custom framework requirements into a single system, where teams define applicability, assign ownership, and maintain a clear view of what is in scope. This centralized foundation helps prevent ownership gaps and keep framework management consistent.

▶ Prevent Duplication with Shared Mapping

Map multiple framework requirements to shared controls. With Drata, a single control can support multiple frameworks at once with consistent scope and evidence. Teams can reuse controls, testing, and evidence across similar frameworks while maintaining clear ownership and flexibility for framework-specific requirements.

▶ Continuously Test Framework Requirements

Drata runs automated tests against mapped controls and collects evidence on an ongoing basis—making it clear when framework requirements are met, when they fall out of alignment, and who is accountable. This continuous testing reduces manual checks and helps teams prioritize gaps before audits or reviews surface issues.

Run Multiple Compliance Programs Without Duplicating Work

HOW MULTI-FRAMEWORK COMPLIANCE WORKS

Choose Your Frameworks
Select which frameworks you'd like to work toward. Most are pre-mapped to DCF controls.

Enjoy Built-In Controls
Utilize the library of standardized controls and framework requirements to deploy rapidly.

Monitor Continuously
Get a complete view of current compliance status across frameworks at any time.

Scale Quickly
Reuse controls, tests, and evidence to rapidly add additional frameworks as your business expands.

Create Custom Frameworks
Utilize your current information to easily expand beyond pre-built frameworks as needed.

Share Your Posture
Connect framework controls and evidence directly to the Trust Center for ongoing assurance.
