DRATA

GROWTH

Scale Trust Faster with Unified GRC + Assurance

DISCOVER THE DRATA DIFFERENCE

Support Compliance Across Frameworks

Whether you're expanding beyond your first framework or planning for multiple frameworks from the start, centralize your requirements in one system built to scale.

With Drata, shared controls, automated tests, and continuously collected evidence help growing teams manage SOC 2, ISO 27001, HIPAA, PCI, and more without rebuilding everything from scratch.

Prove Always-On Trust to Buyers

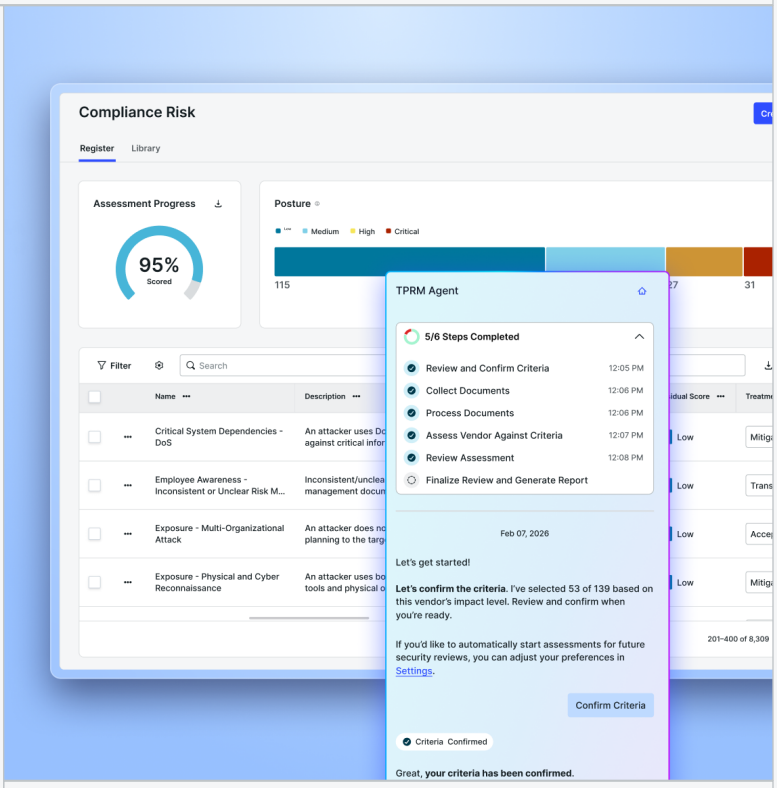

As organizations grow, buyers expect fast, consistent answers about security posture. Give customers, prospects, and partners a self-serve destination to access security content and common documentation.

With Drata, you control access to your branded Trust Center so stakeholders can find the information they need faster—without depending on your team for every request.

Decrease Repetitive Work for Security Teams

As the number of inbound questionnaires increase, manual responses do not scale. Use approved trust content and live program data to respond faster and more consistently.

Drata helps growing teams answer security questionnaires in minutes instead of chasing inputs across spreadsheets, inboxes, and subject matter experts.

Grow Without Adding Operational Drag

Scaling companies need systems that work now and adapt later. Drata gives you configurable frameworks, controls, and workflows so your compliance and assurance programs can evolve with your business.

With Drata, you get the flexibility to meet changing customer and regulatory requirements without taking on the overhead of disconnected point tools.
